SEWER SMOKE TESTING NOTICE

(Daim ntawv ceeb toom ntsuas cov pa tawm hauv tog raj hlaus loj hauv qab qhov av)

In **August, September, and October**, S.E.H a contractor working for the Saint Paul Sewer Utility will be conducting smoke tests of the sanitary sewer system in your neighborhood (see the enclosed map for project testing and mailing areas). **Weather permitting sewer smoke testing will begin August 9th. Testing typically occurs during weekday hours. You will be re-notified approximately 2 to 3 days before testing of the sewer system takes place in your neighborhood. Project is anticipated to be finished by October 30th.**

Informational Meeting (August 8, 2011)

Linwood Park and Rec Center

860 St. Clair (St. Clair and Victoria)

Monday, August 8, 2011 (4:00 to 7:00 p.m.)

Building Managers/ Property Owners/ Residents

1. For those located within the Smoke Testing Project Area:

Access to building roof tops may be needed such that city and/or contracted staff can document simulated smoke emissions from buildings (City Legislative Code 76.13).

Rau cov tsev ua nyob ib cheeb tsam ntawm no:

Tej zaum peb cov neeg ua hauj lwm hauv city yuav tau nce saum nej lub ru tsev saib seb puas muaj cov pa ncho tawm ntawm lub tsev twg tuaj (city legislative code 76.13).

2. For those located within the Mailing Area (see enclosed map):

Before August 8th please fill unused fixture traps and floor drains with water (about 1 gallon for each).

Cheeb tsam uas tau txais peb cov ntawv(saib hauv daim phiam thib nrog tuaj no):

Ua ntej lub 8 hlis vas thib 8 thov nej nchuav 1 thoob dej rau txhua lub qhov dej hauv nej lub tsev.

3. If there is an individual in your building, business, or residence who has respiratory problems and/or mobility limitations please contact the Sewer Utility at (651-266-6171), before August 8, 2011.

Yog tias hauv nej lub tsev los yog ntawm nej thaj chaw ua hauj lwm muaj tus neeg mus tsis taus kev los yog xiam hoob qhab los yog lwm yam thov nej hu tuaj qhia rau peb ntawm Sewer Utility (651-266-6171).

The purpose of smoke testing is to find defects and faulty connections where excess rain water (*Inflow*) and ground water (*Infiltration*) can enter the sanitary sewer system, negatively effecting its economical and safe functioning. Illegal Inflow sources/connections include: sump pumps, roof and foundation drains, and storm drain cross-connections. The information gained from smoke testing will help the City find and eliminate unknown sources of (I/I) entering the sanitary sewer system. **Reducing I/I is an on-going City effort to help:**

- ***Comply with the Met Council Rules.*** The Metropolitan Council of Environmental Services (MCES) may add a demand charge to Saint Paul's wastewater treatment bills if the excessive I/I is not removed from the system.
- ***Maintain Health & Safety (Reduce the Risk of Sewer Back-ups and Sinkholes).***
- ***Extend the Service Life of Public Infrastructure (Lift stations, sewer pipe, etc.)***
- ***Reduce Wastewater Treatment Costs by reducing the amount of clear water that is treated.***

Please see other side of this letter for More Smoke Testing Information !

IMPORTANT INFORMATION ABOUT SMOKE TESTING

Process:

- Simulated smoke will be injected into the sewer system. As a result smoke may be seen coming from manhole covers, storm drains, roof vents, and building foundations.
- After each setup the smoke test will last approximately 30 minutes.
- Photographs will be taken to document potential leaks/defects.
- Inspection crews will not need to enter buildings, unless to gain access to building rooftops.
- Faucets and bathroom facilities can still be used during smoke testing.

Tips to prevent smoke from entering your building (complete prior to test):

- **Run water faucets for a few seconds in unused sinks, tubs, and drains to fill fixture traps.**
- **Pour water into each floor drain (at least 1 gallon)**
- If you have defective plumbing (i.e. no trap), you should consult with a licensed plumber.

If you notice smoke in your building:

- **Do NOT become alarmed.**
- Open doors and windows to ventilate the premises to clear smoke.
- Contact the Smoke Testing Crew Chief, @ (651) 238-0572.
- Simulated smoke will not stain walls or furniture; nor will it leave a residue.
- Consult a licensed plumber in the near future to identify the smoke access area, as the potential exists for sewer gases to enter the building in the same manner.

Safety/ Health Issues:

- There is **NO** danger of fire or explosion of sewer gas with the smoke testing process.
- St. Paul Police and Fire Departments will be notified of the smoke testing.
- **Simulated smoke is not harmful to your health, but may cause some coughing.** Smoke irritation is temporary and should disappear after exposure has ceased. When possible avoid unnecessary exposure to simulated smoke.
- **If there is an individual in your building, business, or residence who has respiratory problems and/or mobility limitations please contact the Sewer Utility at (651-266-6171), before August 8, 2011.**
- A copy of Material Safety Data Sheet (MSDS) for the simulated smoke can be found on Saint Paul's Home website page (www.stpaul.gov) under the headings of Government/Public Works/ Sewer Utility Division/ Smoke Testing.

For Questions Before Testing – Please Contact Saint Paul Sewer Utility
